EDUCATION:

College of Marin, Kentfield, CA (2019 to present), Undergraduate Computer Science.
Redwood High School, Larkspur, CA (2014 to 2019).

EXPERIENCE:

Website Development Assistant
Matejka Marketing, Inc., San Francisco, CA (June 2019 – Present)

Assists with a range of website development projects for bar associations and law firms, as well as maintenance of existing websites. Tasks include advanced HTML, CSS and content publication.

SPECIAL SKILLS:

Through my studies at College of Marin and my work at Matejka Marketing, I am skilled in Python, DJango, C++, HTML and CSS.

PROJECTS:

Task Completion Queue
Coded in Python, the Task Completion Queue is a way to publish tasks into a queue. All information is stored in a database rather than in the local javascript. Tasks are ordered by priority first, then by oldest to newest. (https://davidgoldmatejka.herokuapp.com/tracker/projects/1/)

No-Currency Gambling Website
AJAX powers the backend and coin values are updated without calls to the server for page updates. Database values are changed based on the outcome of a JavaScript animation for cards or roulette. (https://djangosportsbetting.herokuapp.com)
